

# Mercury

**1**

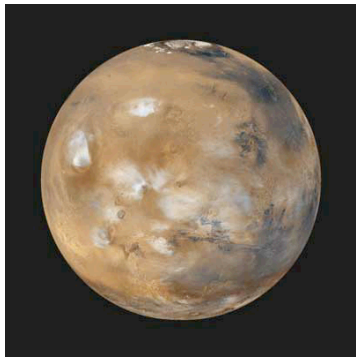

Mercury has no atmosphere (air). The night side is very cold and the day side is very hot.

# Venus

**2**

Venus is covered in clouds. Its surface is hot enough to melt metal!

# Mars

**4**

Mars has the largest volcano in the entire solar system. Olympus Mons is as tall three mountains on the Earth stacked together.

# Jupiter

**5**

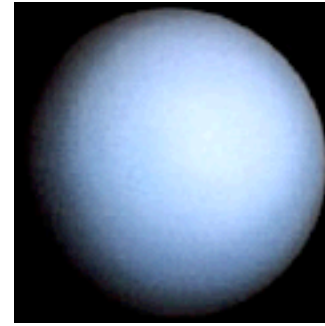

Jupiter is the biggest planet. Jupiter's Great Red Spot is a giant storm bigger than the Earth and at least 400 years old.

# Saturn

6

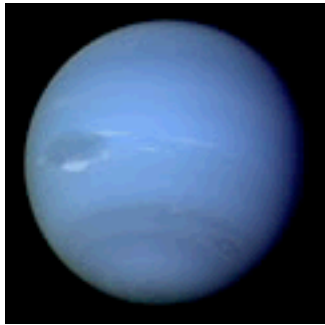

Saturn is best known for its beautiful rings.

# Uranus

7

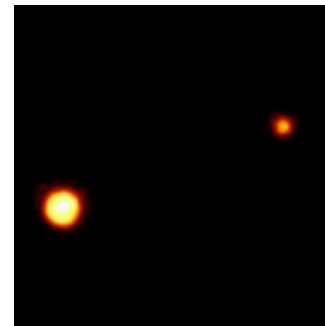

Uranus spins on its side.

# Neptune

8

Sometimes Neptune is farther from the Sun than Pluto.

# Pluto

9

Pluto is a tiny, icy planet. Pluto has a large moon called Charon.

# Earth

**3**

Earth is special because it has life including plants, animals, and people.

# Earth

**3**

Earth is special because it has life including plants, animals, and people.

# Earth

**3**

Earth is special because it has life including plants, animals, and people.

# Earth

**3**

Earth is special because it has life including plants, animals, and people.
